

After deciding to go with the idea of having class information and professional information displayed on my website, I thought about how I wanted to structure it. Seeing that I'll be talking mainly about work experience with a little bit of class information, I decided to try and go for something minimalistic that had an easygoing vibe to it. After brainstorming a few ideas, I drew out how I imagined the layout of the two pages. On the first HTML page I envisioned a title at the top (consistent on both pages) with the link between the pages underneath it. Underneath the link are 3 articles with paragraphs of information in each. Initially I drew columns but later decided to go with rows instead. Further down in the design of the website I added the button at the bottom of this page containing my favorite song as an added touch of personalization. Clicking on it plays the song. In the last round of the design process I also added the thin blue line bordering the top of white section of both pages.

For the second HTML page I displayed work experience. Similar to the first page, I have the title at the top of the page with the two links between the pages underneath. I initially drew out one section but later came to realize that two were needed. Under that I have both sections, one for work experience and the other for my resume. In the first section I talked about some of my previous jobs and how they've left their impact. In the second section I talk about my resume briefly and have an image of it underneath. I figured that the best way to incorporate the resume would be as an image so that you can view it on site without having to leave. Since it is an image, the link to my email and LinkedIn don't actually work so above the image I've added a hyperlink to my actual LinkedIn.

I decided to go with a soft blue color scheme to the website, adding it to the border of the page as well as to the article and button backgrounds. The soft blue is easy on the eyes and is a calming color to look at.

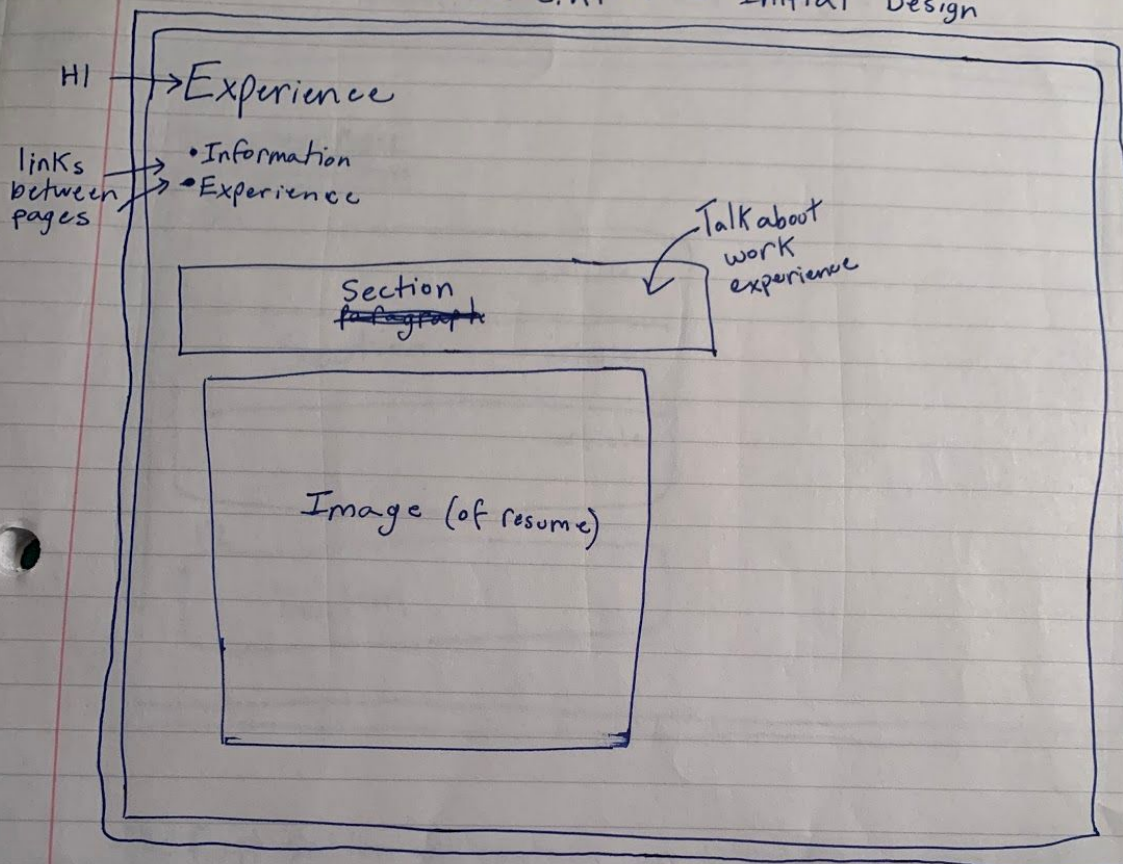

Below you will find 4 images, from first to last being: Class information rough draft, work experience rough draft, class information final design and work experience final design. I have some notes that I made along the way made on the page, with the rest of the explanation already given above.

## index.html - Initial Design

- make different font sizes for H1, H2, etc in CSS

## resume.html - Initial Design

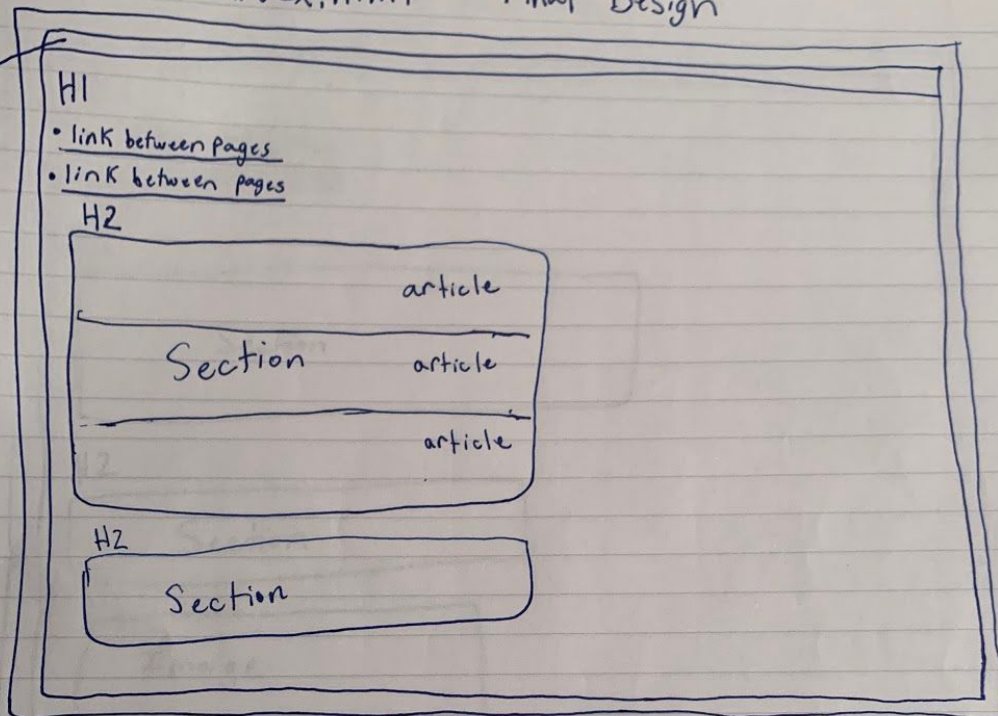

Border background-color - pastel blue  
body background-color - white

• pastel blues  
color  
theme

## index.html - Final Design

top  
border

- The first section will contain an introductory paragraph followed by three rows of articles.
- The second section will contain a button that ~~plays~~ <sup>Plays</sup> a song when pressed.

H1: Alec Broughal - MI 349 Final Project

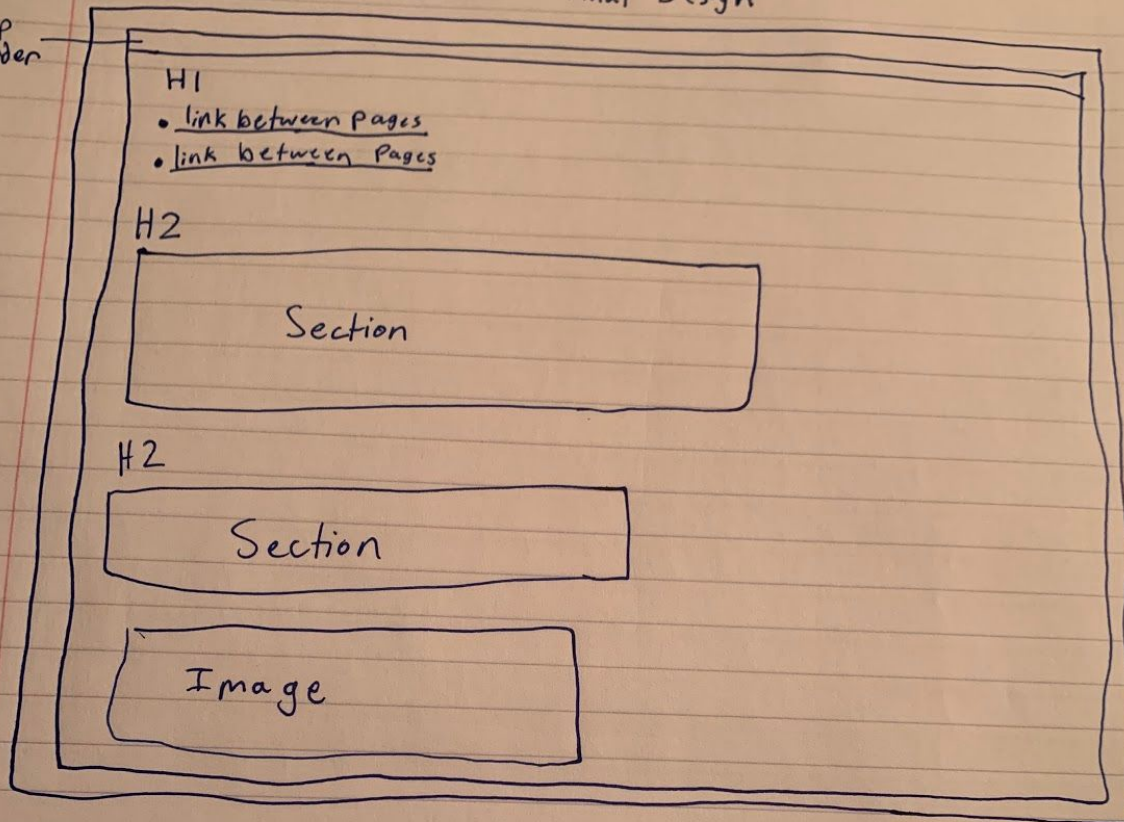

H2: MI 349 Information

H2: info on what the button does

- article ~~rows~~ rows same color as page border. Button same color as top border.

## resume.html - Final Design

top  
border

- Bodies of paragraphs stored within sections. First section talks about

H1: Alec Broughal - MI349 Final Project

H2: Work Experience

H2: Resume

- Blue color scheme across both pages.
